FHT-45 Groundwater Filters

High turbidity

The Waterra FHT-45 offers the user the most surface area available in a capsule designed specifically for groundwater monitoring. The unique open pleat geometry and 600 square centimeters of surface area provide the maximum media exposure while ensuring that even with the most turbid samples, you will not lose filtration media to blinding.

The Waterra FHT-45 uses 600 square centimeters of high quality polyethersulphane 0.45 micron filter media, which offers excellent particle retention above the target micron size range. The high void volume of this media also helps prolong media life.

The Waterra FHT-45 also offers the user greater flexibility over other products by providing a compound inlet. It has both a 3/8" threaded nipple and a 1/2" hose barb allowing the filter to be attached easily to a variety of pumps and tubing sizes.

NOW PRE-RINSED

All Waterra in-line disposable filters are pre-rinsed with one litre of de-ionized water to ensure purity and are now certified to rinse clean. Independent ICP/MS analysis proves it.

DISPOSABLE FILTERS
