## MONITORING ACCESSORIES

### High Purity Tubing

#### **Low Density Polyethylene**

Low Density Tubing is the most popular tubing choice for use in shallow well. LDPE tubing is more flexible than HDPE and is less likely to develop kinks. The difference in rigidity between LDPE and HDPE does not have a significant impact on the performance of the inertial pump in shallow wells. LDPE tubing is also recommended for use with the Proactive™ line of **12 Volt Submersible Pumps**.
